

Hi, I'm Platica Ciprian!

## Experience

**Kuende Front-End Developer** (Backbone and Marionette written in Coffeescript)

*Job description:* My team and i created a single page application with a lot of features:

- infinite scroll newsfeed with posts and comments/replies
- notifications
- chat with drag and drop windows
- music player with playlists and queue
- photo gallery and photo browser
- gamification panel
- search friends
- filter newsfeed based on your interests

We had used model-view-controller architectural pattern. Backbone helped us out with the models and collections. Marionette is a framework based on Backbone which has views and collection views with very handy life-cycle methods. It also has a router linked to a controller so when a route is matched a method of the controller is executed. For persistence we used a RESTful API and we had to design the structure of the requests and responses. Because we love a clean code without parentheses, braces or semicolons we chose coffeescript and stylus and we had a lot of fun using them. We also had to concatenate all the files in a single file based on dependencies, we used Require.js with Gulp to build and deploy the app. We created a Node.js server with Express for development only so we could test our APIs and the UI with Selenium and Intern.js.

jan 2014 - oct 2016

#### **ARI Love Full-Stack Developer (React and Node.js written in ES6)**

*Job description:* I joined an awesome team and we developed a single page application using React and a backend using Node.js and Amazon Web Services. My work was to rewrite the landing page to be responsive and load faster, i implemented and refactored some components to be responsive. I've done the settings page ui and the backend for it.

---

*feb 2016 - apr 2016*

#### **XL Team Full-Stack Developer (CSS, Javascript and Wordpress)**

*Job description:* I worked on several projects in this company. For a project i created a gantt chart with a bunch of features. For the rest of the projects i have build presentation websites with CMS admins written in PHP. I have communicated very well with clients from Netherlands, UK and US.

---

#### **Proseo E-Commerce (CSS, Whitehat and Blackhat SEO, Google Analytics/AdWords)**

*Job description:* I have installed wordpress or a e-commerce platform on a host and customize a theme. I created macro-scripts to create backlinks to our websites on some directory platforms so google will improve the search rank of some keywords.

---

*oct 2012 - aug 2013*

## **Skills**

#### **JavaScript:**

**Langs:** CoffeeScript (2 years), ES6 (6 months)

**Frameworks:** Backbone.js with Marionette.js (2 years), React.js (6 months)

**Node.js:** Express, Amazon Web Services, Google Cloud Platform

**Module bundlers:** Require.js with Gulp, Webpack

#### **CSS:**

**Langs:** Stylus, Less, Sass

**Frameworks:** Bootstrap, Materialize.css

**Methodologies:** BEM, SMACSS, OOCSS, ACSS

CSS Modules

#### **HTML:**

**Langs:** Handlebars, Jade

HTML5

#### **PHP**

WordPress

OpenCart

Magento

MySQL

#### **Github**

#### **Design:**

Photoshop

Sketch

Illustrator

Avocode

# Education

Bachelor degree in Mathematics and Computer Science  
Faculty of Mathematics and Computer Science,  
University of Bucharest, Romania

---

2012-2016

"Mihail Kogalniceanu" High School,  
Galati, Romania

---

2008-2012
